

Changing your default skin to a supported KODI skin will bring new life and new features to your ZDMC experience. Here is a quick rundown on how to achieve this:

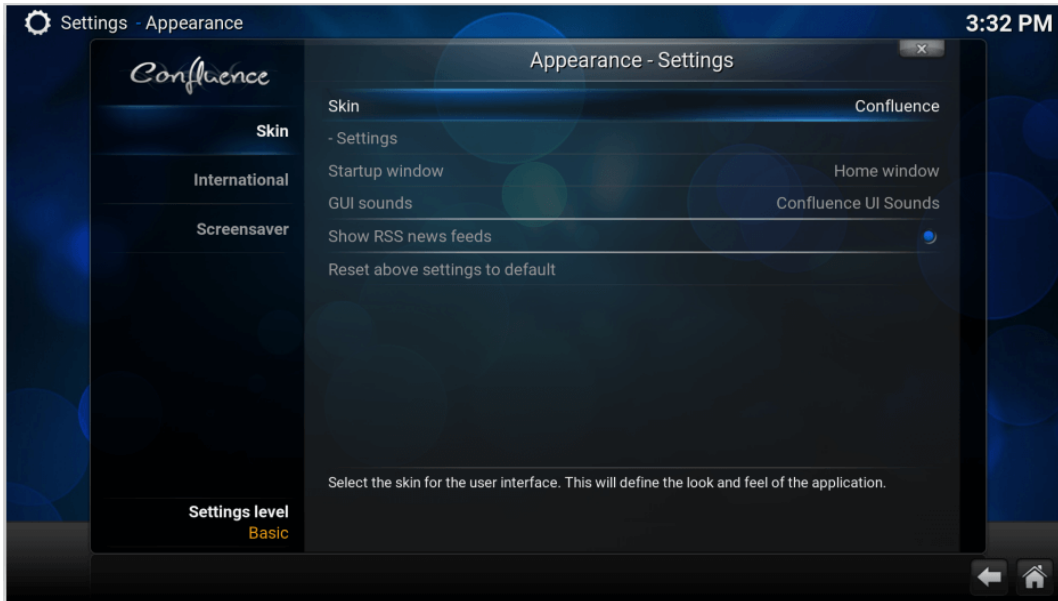

Open Kodi / XBMC, Hover over System and then click on Settings.

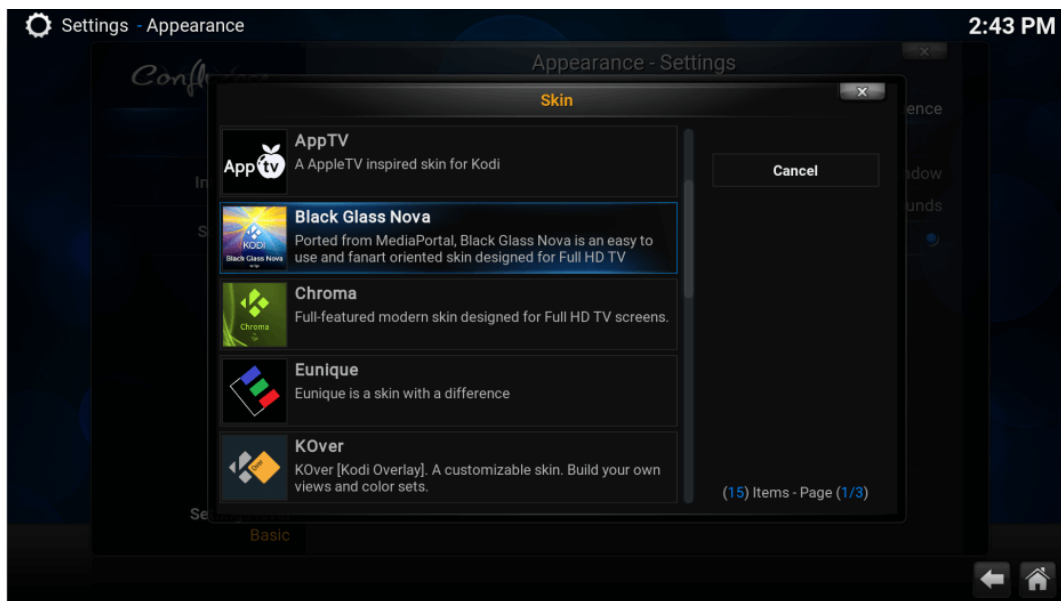

Click on the first button Appearance

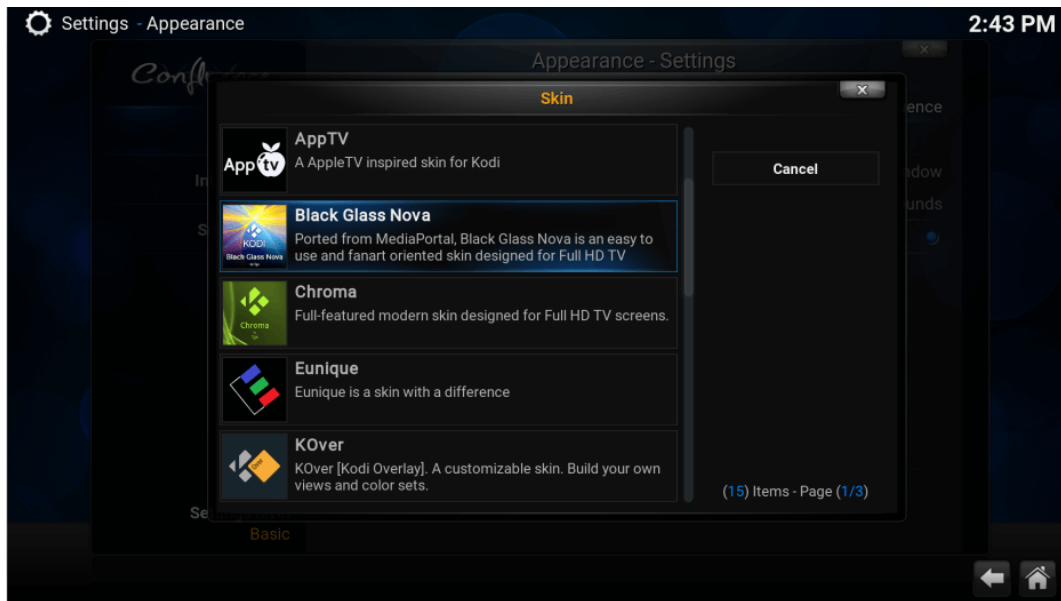

Select skin and click on it

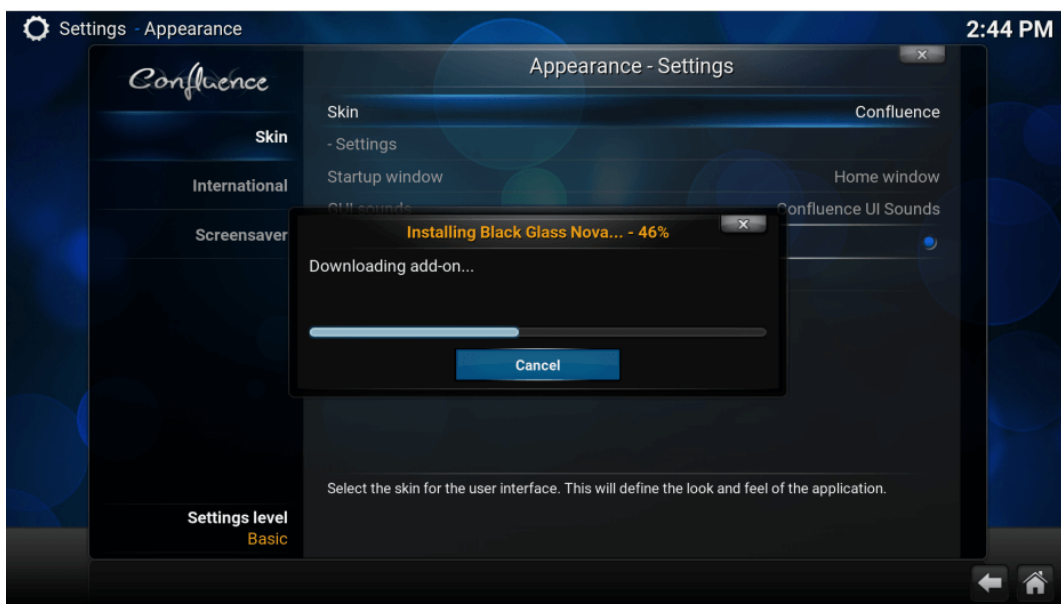

Click to install one of the skins you like.

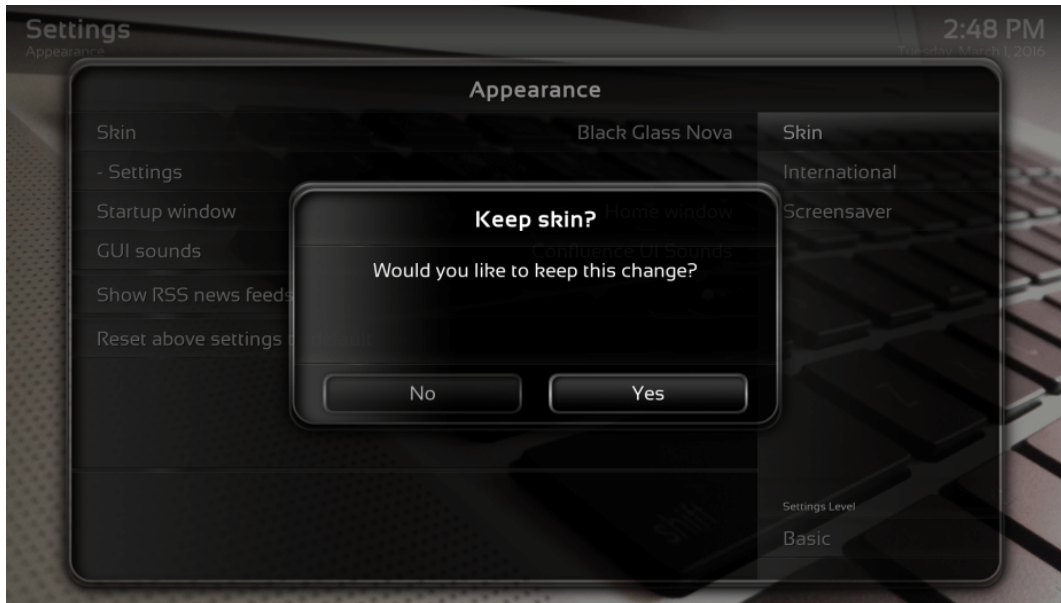

Select one of the skins installed or Click "Get more..." to select more available skins.

Installing will take a moment, so please wait...

When installation of the skin finishes, select "Yes" to make the skin your default skin.

Congratulations, you have installed a new skin.
