

This is an extended application for use on the ZIDOO X9. This NAS Kit Application expands the ZIDOO X9 into a simple NAS device. It is based and developed entirely on Linux.

Functions: Built in Samba server, FTP server, SSH(Dropbear), Aria2, Transmission through web management.

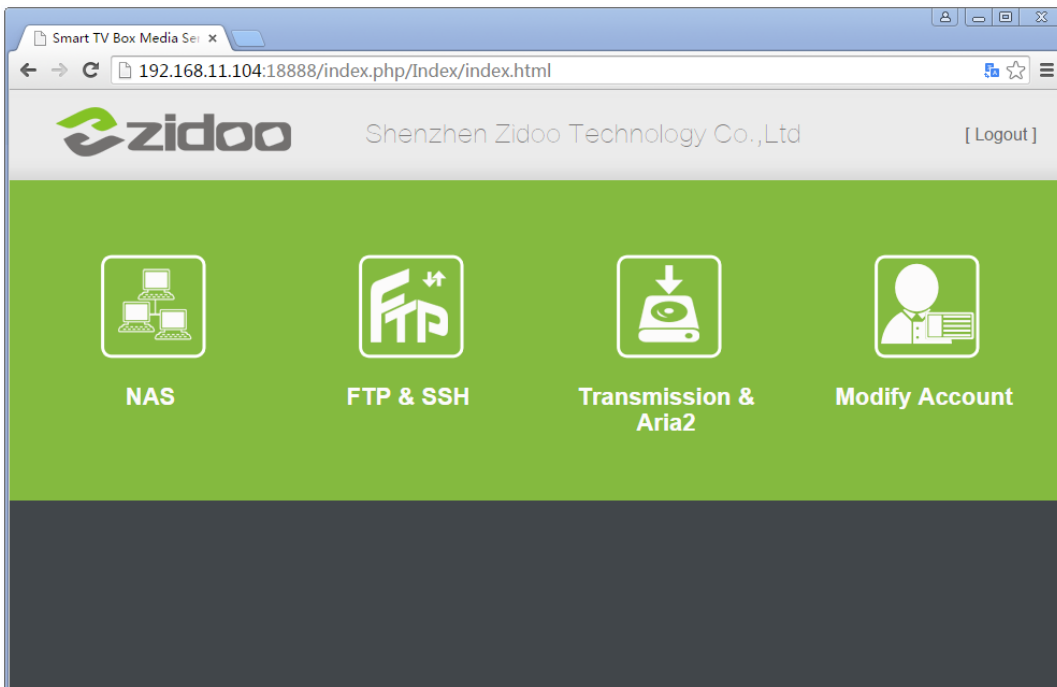

Install the application by downloading and running this file: http://apidl.zidoo.tv/naskit/ZidooNAS_1.0.7.apk

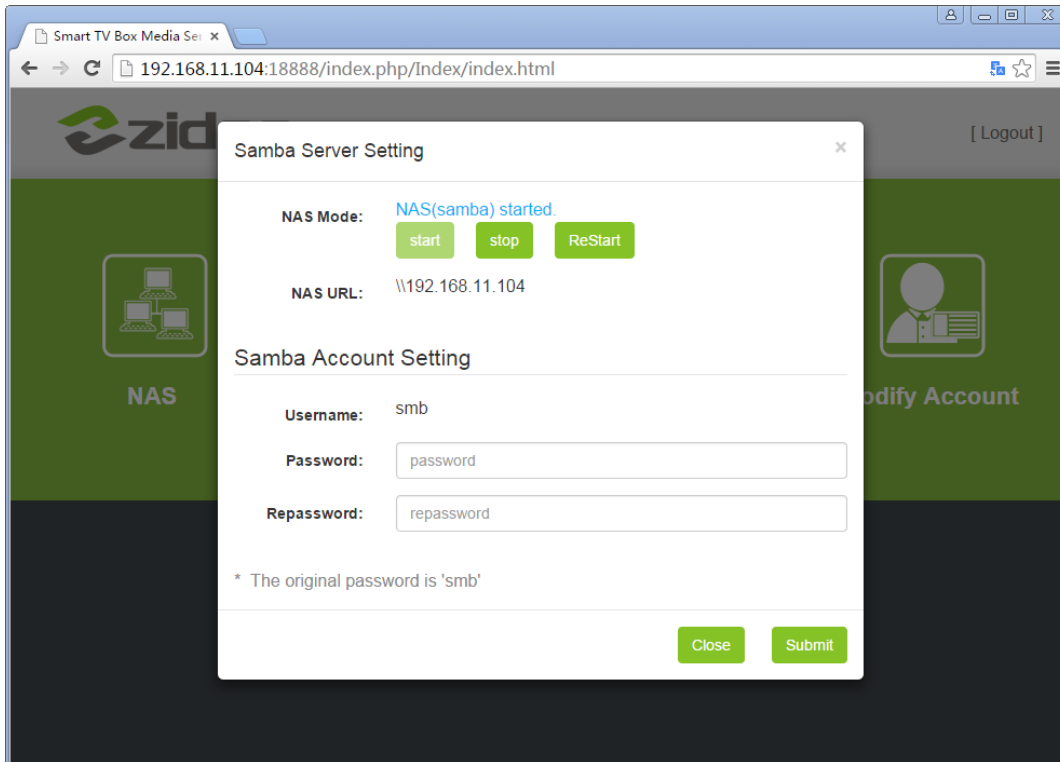

Find the X9's IP address open using a web-browser from your PC.

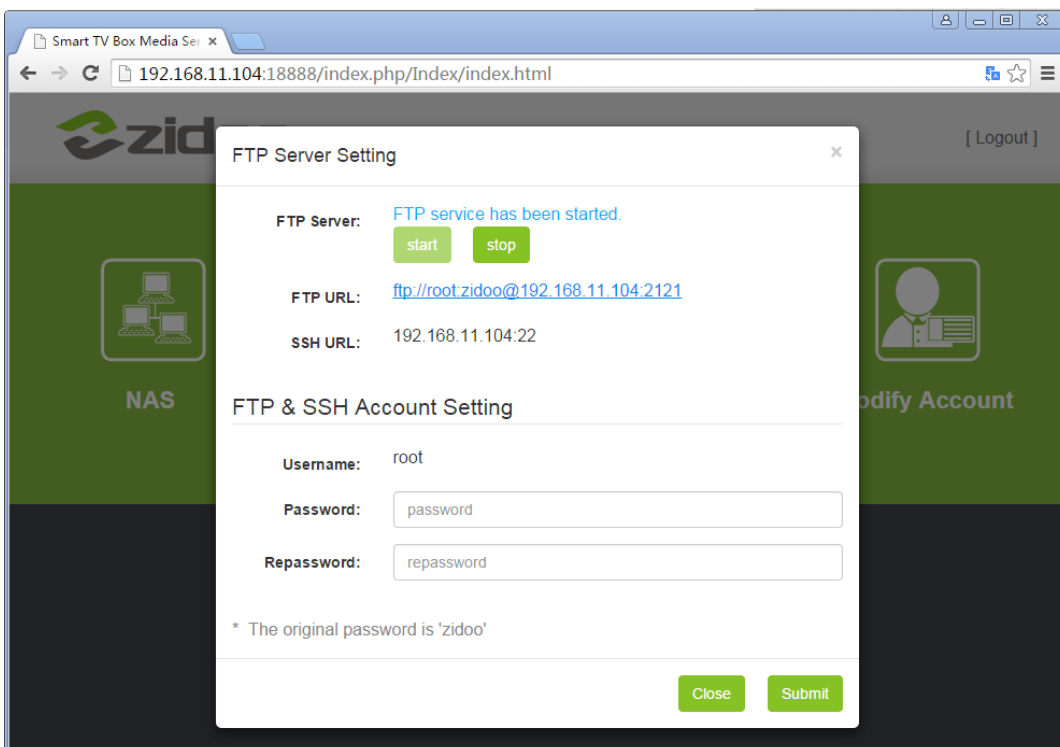

Use the default username :`"admin"` and password: `"admin"`. This can be changed later.

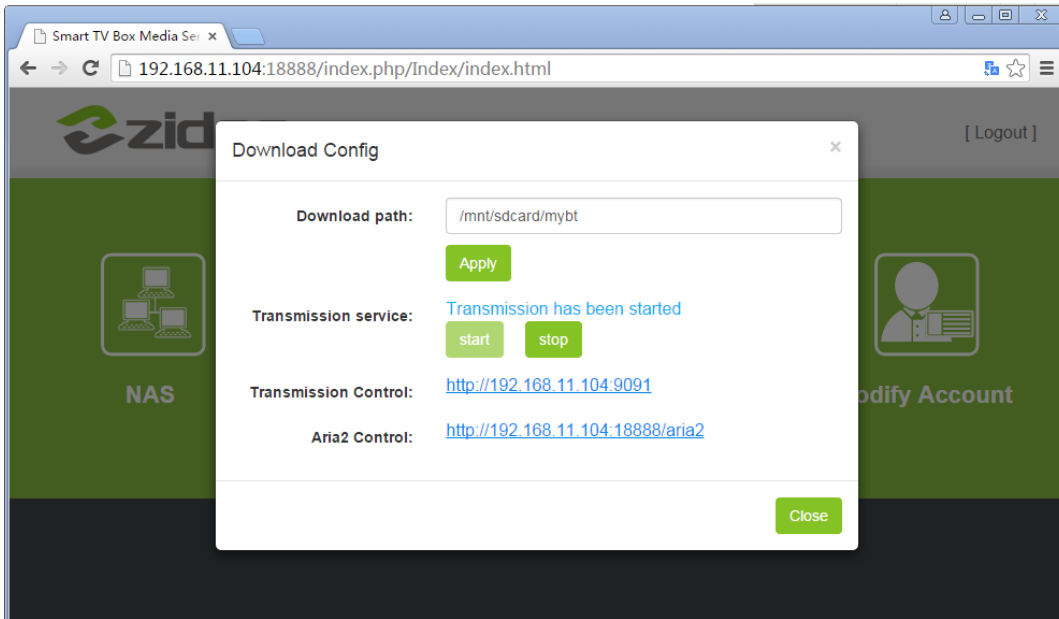

Click "NAS" to Configure the NAS settings

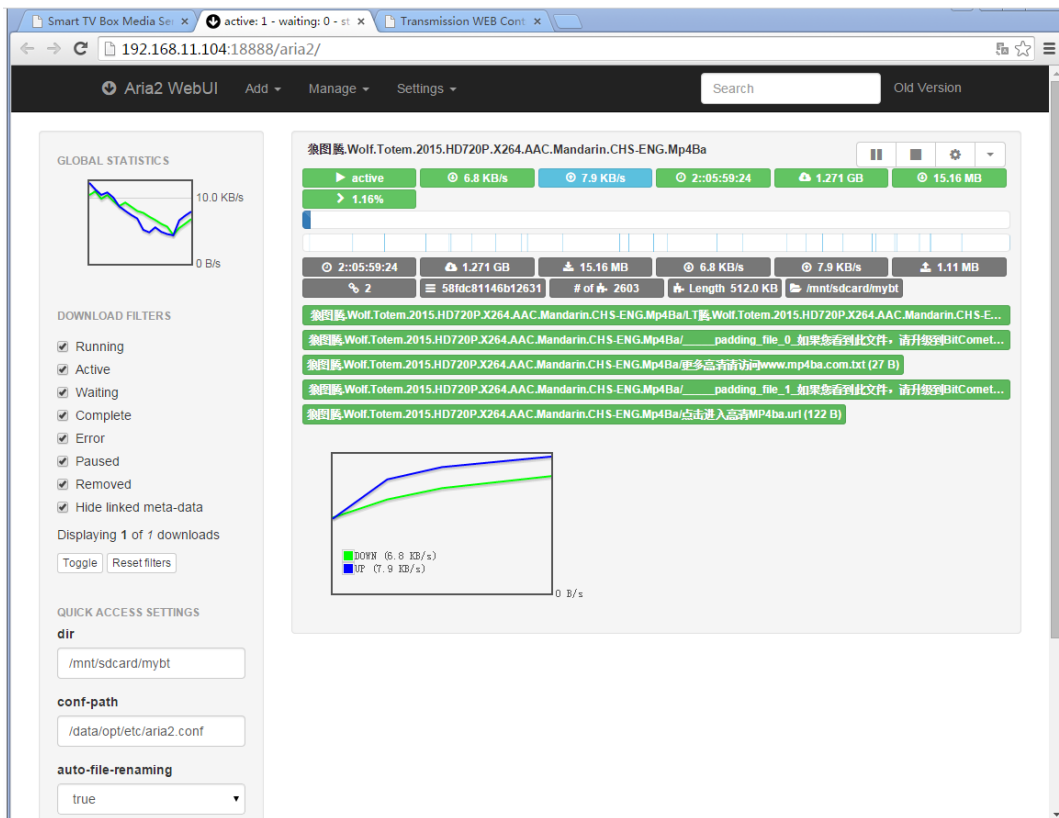

Click "FTP & SSH" to configure the ftp and ssh Servers.

Click "Transmission & Aria2" to configure your download settings.

Add and download resources.

Downloading....

The screenshot shows the Transmission web interface in a browser window. The address bar displays the URL `192.168.11.104:9091/transmission/web/`. The interface includes a navigation sidebar on the left with categories like 'Downloaded', 'Paused (1)', 'Sending', 'Checking', 'Actively', 'Error (1)', and 'Warning'. The main area shows a table of torrents. One torrent is listed with the following details:

Name	Total size	Percent done	Remaining time	Ratio	Status	Seeder	Leecher
失孤.Lost.and.Love.2015.TC720P.X264.AAC.Mand	2.08 GB	0.19%	∞	0.1021	Paused	23643 (0)	45100 (0)

At the bottom of the interface, there is a pagination control showing 'Page 1 of 1' and 'Displaying 1 to 1 of 1 items'.
