

The first time you will need to set a lock screen PIN or password before you can use credential storage, ignore if previously set.

Go to the setting page: **SETTING→More→VPN**

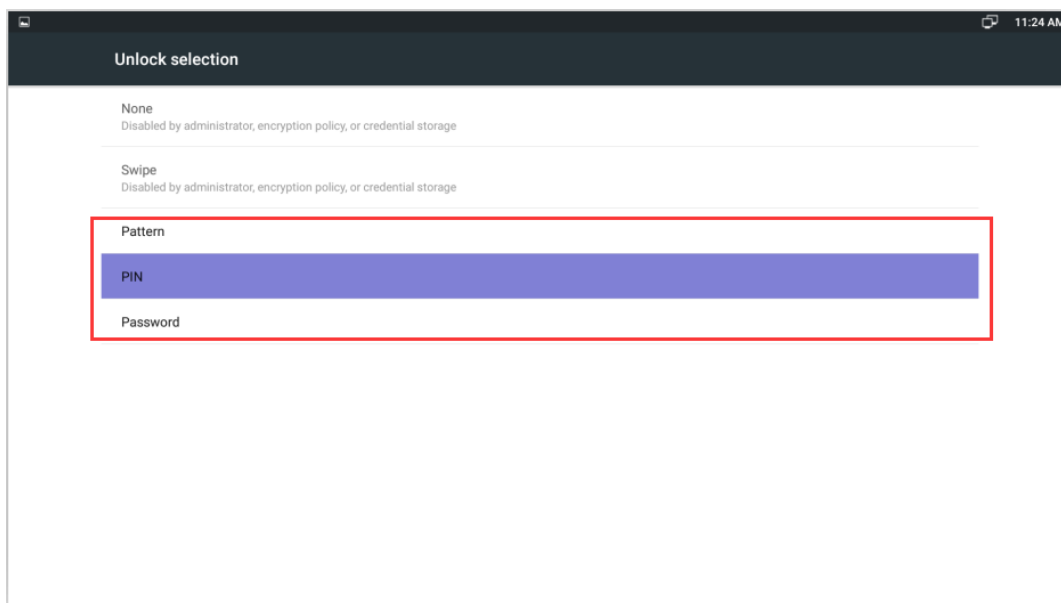

Click **VPN**

When you configure the VPN for the first time and remember, you still need to set a lock screen PIN or password before you can use credential storage.

Select one of the lock options.

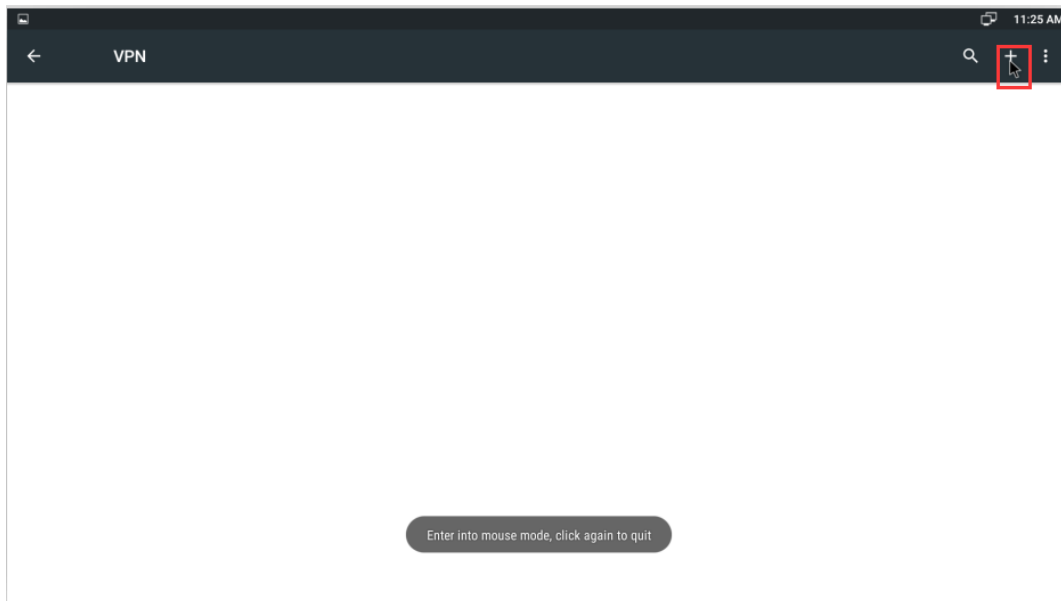

In this example, we selected the PIN lock option. Setup the password and confirm.

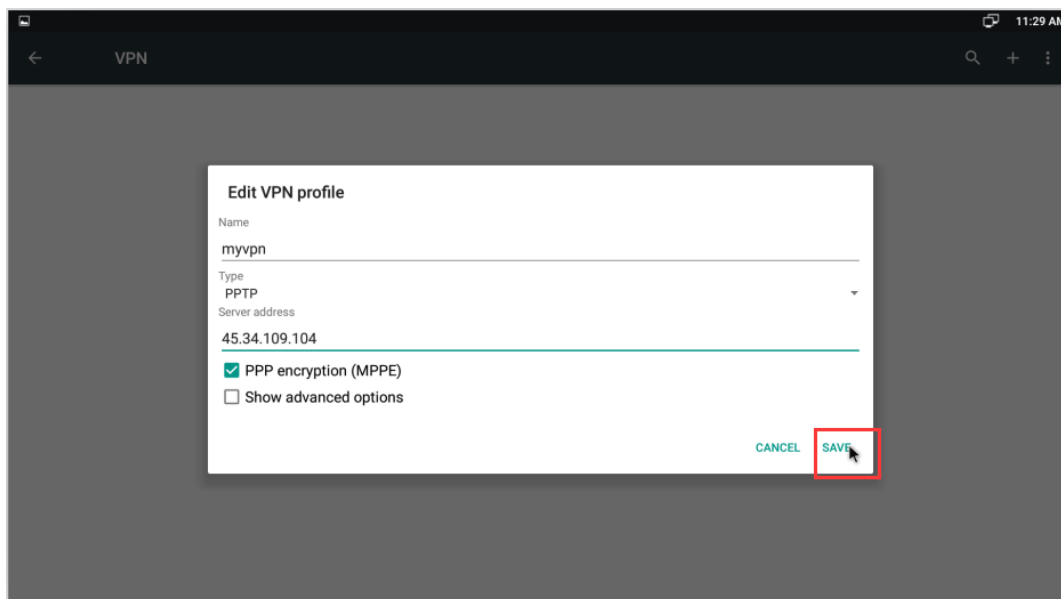

Click DONE to save the settings.

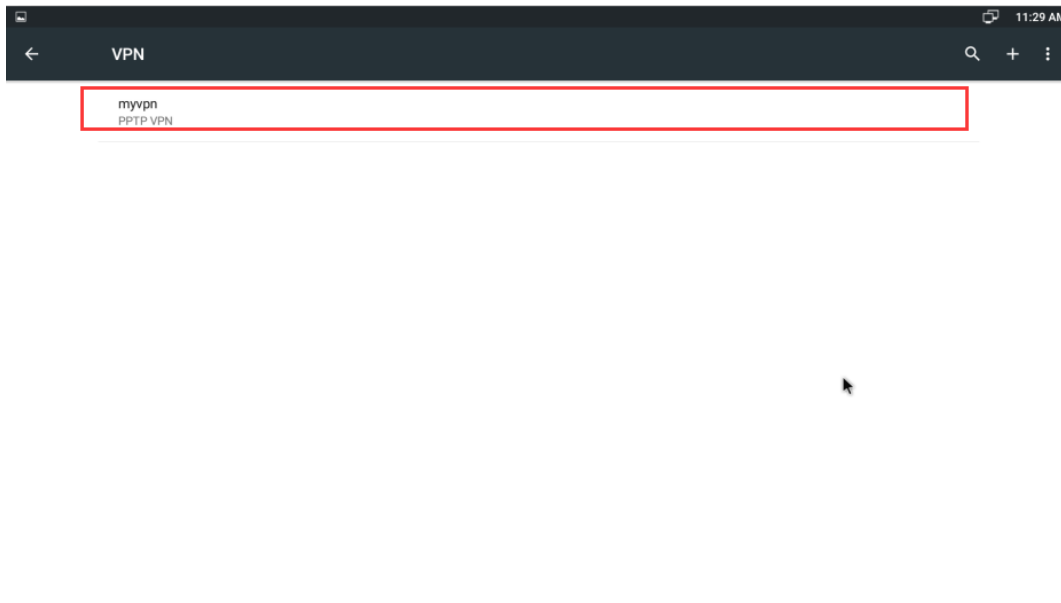

Click on the top right to add a VPN server.

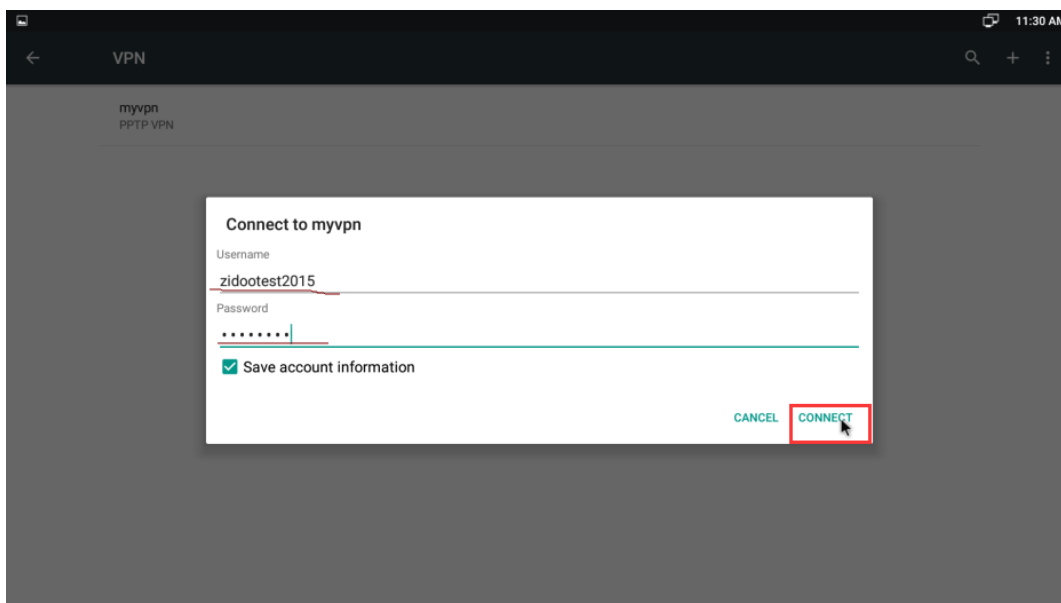

Input a Name and choose a Type the drop down and then input the Server address you have.

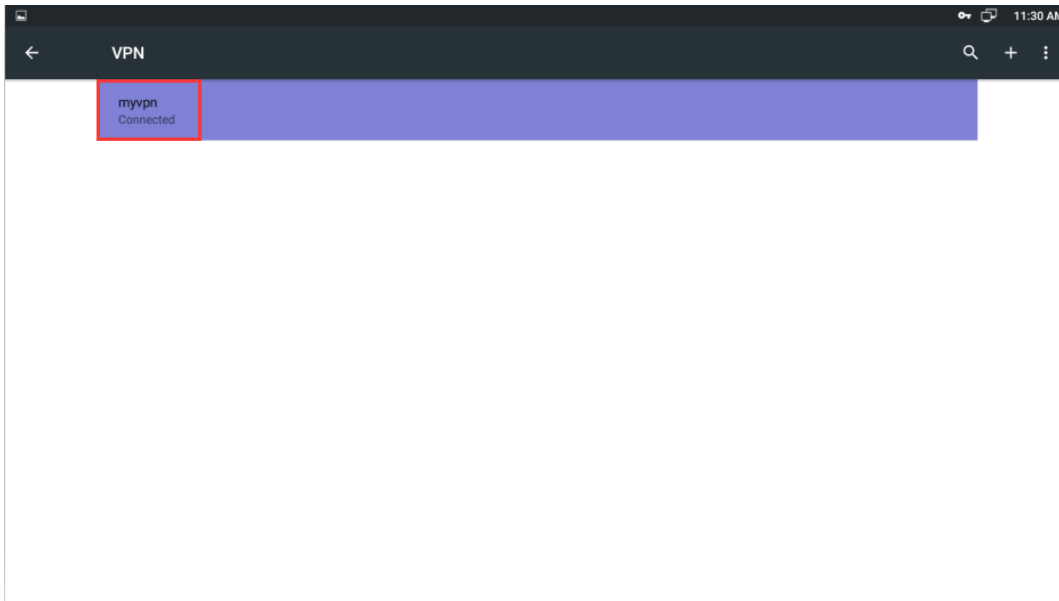

Once completed you will see your VPN connection.

Just enter the Username & Password to connect.

When your VPN be Step 11: If you entered everything correctly, your VPN setting will show Connected.

In this example you will see that Google has been Shielded from your location.
